Introducing

impact

Harnessing the power of nature to deliver ultra-high press performance.

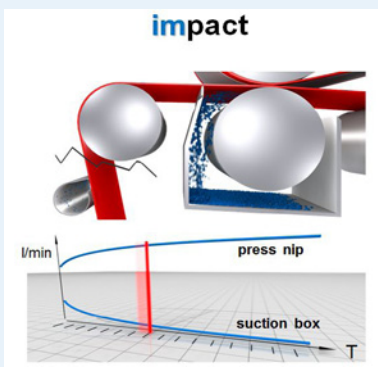

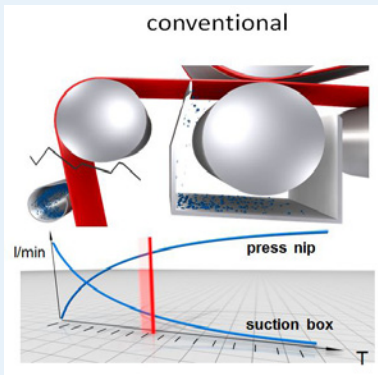

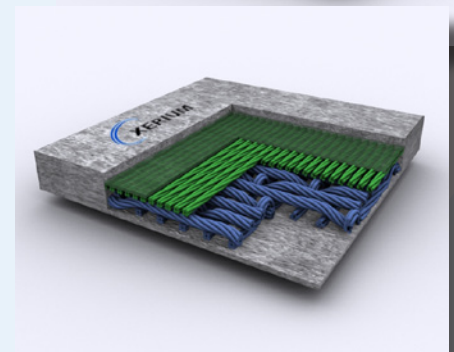

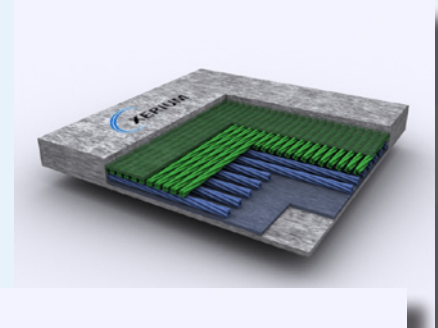

impact's unique combination of innovative raw materials, highly compressible base structure elements, topped with our exclusive premium needling technology delivers unsurpassed press performance.

impact technology utilizes hydrophilic base yarns aligned perfectly parallel in order to provide an ideal combination of pressure uniformity, mark-free surface, exceptional dimensional stability and immediate nip saturation.

Combining this new base concept with our unique Huyperm and Huyerpunch-D needling technology results in a premium performance press fabric family of products to provide:

- immediate startup
- lower energy consumption
- maximum sheet quality and printability
- maximum dimensional stability
- active self-cleaning
- optimum steady state performance

Embrace the power of nature and let us show you how impact press fabric technology has already helped papermakers improve their press section performance.
