HIT YOUR TARGET

Technology

Since Axxelerator is already engineered with a unique base fabric concept which combines the advantages of a flow-modulated sheet side surface with the drainage-stabilized bottom side, the all new Axxelerator QS has been re-engineered to a higher level of performance.

Axxelerator QS is designed with a very fine and smooth paper side, and highly hydrophilic components within the drainage-stabilized bottom side delivering immediate and consistent nip saturation.

Application

- newsprint, SC, MC, LWC, FI
- last presses with high loads and less water amounts
- last presses equipped with suction felt guiding roll
- vibration prone positions

Benefits

- immediate felt saturation leads to shorter break-in time providing higher production during start-up
- increased nip dewatering improves self-cleaning effect of the felt
- optimized printability and improved runnability due to flow-modulated drainage
- substantial energy savings throughout the entire felt life
