Technology

ProGloss composite roll covers utilize the latest composite technology to deliver the industry's leading combination of wear resistance, impact resistance, and durability while generating industry leading gloss level for all calender applications. This cover family also maintains the best-in-class ductility of Xerium's roll cover options. ProGloss covers deliver superior gloss to most any calender application.

ProGloss covers incorporate a newly developed epoxy matrix and filler materials enabling improvements in gloss sustainability, run time and barring resistance while maintaining extreme resistance to damage.

- **ProGloss BR** – Barring Resistant Cover – Utilizing a newly developed hard epoxy matrix providing improved properties that deliver superior barring resistance and extended cover life.
- **ProGloss XT** – Extra Tough, Extra Life Cover – Incorporating a new, harder and more wear resistant nano-filler material to deliver the highest ductility and flexural strength with high filler ratios providing industry-leading life potential.
- **ProGloss XS** – Extra Smooth Cover – A new epoxy matrix ensuring ductility and flexural strength with high filler ratios, thereby delivering superior cover smoothness with enhanced wear resistance.

Benefits

Superior gloss

Superior wear resistance and resistance to damage

Longest cover life potential
